

“Centromash” company is a Ukrainian manufacturer of small-panel combined formwork.

Our production is characterized by strength, reliability, and high range of application. Our formworks can be successfully used for large-scale constructions, as well as for private ones. We try our best to put an accent on all manufacturing processes and maintain quality control for each produced item. All products are certified and pass double quality control. Numerous tests allowed us to achieve the highest perfection factors, including formwork maintainability, reliability, and bearing capacity.

Wall form is easy to assemble therefore it helps to cut the necessary erecting time and significantly increases labour productivity. In general it minimizes construction periods.

Figure 1: A 3D rendering of a construction formwork structure, showing a grey frame with yellow panels and a platform with ladders. The structure is supported by diagonal bracing. Two grey arrows point from the bottom of the structure towards the right side of the page.
